

Dattar

NEW BRAND

SAFETY AND QUALITY

ATTAR means "horses" in the Kazakh language. The name of our brand embodies the strength and independence of these animals.

Attar tires make for confident driving on roads of various complexity thanks to the efficient grip ensured by sophisticated tread patterns.

Attar tires showcase the quality guaranteed by the high manufacturing standards of Tengri Tyres.

Choose Attar tires and be sure to drive safely!

Light vehicle tires

TYPE AND SIZE

14-17

ATTAR W01

- Maneuverable
- Self-cleaning from sludge
- Safe in bad weather

Studded snow tires for safe and comfortable driving on winter roads even in bad weather. Confident driving through snow slush and sludge is provided by sloped blocks in the shoulder area of the tread, efficiently removing snow and water from between the road and the tire.

TYPE AND SIZE

14-17

ATTAR S01

- Fuel saving
- Low noise level
- Steerable and stable

Tires for various types of road pavement. The tread pattern ensures good stability and steerability. Special rubber compound saves fuel and reduces noise.

SUV tires

TYPE AND SIZE

15-18

ATTAR W02

- **Tight grip**
- **High wear resistance**
- **Low noise level**

Studded snow tires with high wear resistance and low noise level in driving. These features are provided by a specially designed asymmetrical tread pattern and wide spacing of studs. Solid grip with icy or wet road is provided by the blades that are closely spaced throughout the tread width. Enhanced elasticity of the tread blocks improves longitudinal grip.

TYPE AND SIZE

15-18

ATTAR S02

- **Tight grip**
- **High wear resistance**
- **Confidence on uneven roads**

Tires for asphalt and unpaved roads. Good grip and high wear resistance. Special ribs in the central part of these tires provide better maneuverability and grip on wet surface, and the tread pattern makes for high acoustic comfort.

Tires for commercial vehicles

TYPE AND SIZE

15-16

ATTAR W03

- **High strength**
- **Safe on ice**
- **Confident maneuvering through snow**

Studded snow tires with improved strength for light trucks and minibuses. This model is suitable for driving on snow-covered, icy, wet, and dry roads within the city and on the freeway. Multi-row studding makes these tires perfect for roads completely covered with ice and deep snow alike, helping the driver maintain full control of the vehicle even in difficult weather.

New highly-automated manufacturing with double quality control

Attar tires are manufactured by Tengri Tyres in Saran, Karaganda Region, in the Republic of Kazakhstan.

This new plant was built and fitted with automated equipment of the leading manufacturers in the tire-making industry.

You can count on the consistent quality of our products as every tire we make goes through two quality control stages: visual and automatic. First, each tire undergoes a visual inspection by an expert who can identify dozens of possible defects. Then an automatic inspection to check the dynamic parameters, such as road-holding ability, runout, etc.

Only tires which passed 200 % quality control are released for sale.
